

October 1, 2008

On behalf of PMI Nutrition International's Mazuri® Exotic Animal Nutrition group, I would like to inform you of a change being made to **Mazuri® Exotic Gamebird Breeder Diet 5639**. As part of our continued efforts to provide optimal nutrition, we have changed this diet from a pellet to a slightly smaller extruded particle (3/16" x 3/16"). Extruded diets are generally more digestible and more uniform in particle size, and thus will provide enhanced nutrition to your valuable exotic gamebird species. Additionally, extruded diets are more physically stable and have less fines and waste, providing more value in each bag of Mazuri® Gamebird Breeder Diet. The new extruded diet will be packaged in a 40 pound bag. You can order this product as of October 1, using the code number **5639** and/or **0032290**. Now, all three of our outstanding Exotic Gamebird diets are extruded, making transition between the diets even easier!

At PMI Nutrition International, we are committed to meeting the nutritional needs of exotic animals, and to ensuring customer satisfaction with our Mazuri® products. If you have any questions or concerns about this product, or about any of our products, please feel free to contact me.

Sincerely,

Elizabeth Koutsos, Ph.D.
