

# Mazuri®

## A World of Good Nutrition

July 14, 2014

Nutritionists at MAZURI® Exotic Animal Nutrition have created a new formulation for our Ferret Diet. The changes that have been made include:

- Replace synthetic antioxidants with natural source antioxidants (mixed tocopherols and rosemary extract)
- Provide a more diverse blend of animal proteins to better simulate the diversity in wild-type diets
  - Poultry meal
  - Fishmeal
  - Porcine-based blood meal
- Reduced starch levels to less than 15% starch - more appropriate for obligate carnivores
- Addition of probiotics and natural fiber sources to support GI tract health
- Fish oil to provide multiple omega-3 fatty acid sources
- Still contains urine acidifiers

These changes have resulted in slightly darker looking particle for ferrets, but will provide the same levels of essential nutrition as our previous formulation. This product has been tested for acceptance, with excellent results, by a number of ferret veterinarians and rescues. We are excited to now offer this product to our customers. MAZURI® Ferret Diet will continue to be available in a 25 pound bag (5M08/0001473) and a 5 pound bag (5M08/0060817). If you have any questions or concerns, please contact us at [info@mazuri.com](mailto:info@mazuri.com).

Sincerely,  
Liz Koutsos, Ph.D., Director
